## THE PMC STORY

Premier Micronutrient Corporation (PMC) antioxidant scientists have completed several studies that demonstrate reduction of oxidative damage and inflammation and improvement in immune function. The PMC formulation is a unique, proprietary micronutrient combination based on the highest level of antioxidant science. It has been studied with federal laboratories and military institutes and has been shown to be effective against oxidative damage from several sources. It is well documented that increased oxidative stress and acute or chronic inflammation are major factors in the initiation and/or progression of several diseases such as diabetes, cancer, heart disease and hearing problems. They are also involved in aging processes. Antioxidants at appropriate doses and dose schedule can neutralize free radicals as well as reduce inflammation; therefore, they can be helpful in a variety of adverse health conditions.

PMC conducts important studies with the Office of Naval Research (Arlington, VA), Naval Medical Center (Balboa, CA), Marine Corps Systems Command (Quantico, VA), Naval Health Research Center (San Diego, CA), NASA (Houston, TX), Naval Medical Research Center (Silver Spring, MD) and U.S. Army Medical Research Institute of Chemical Defense (Aberdeen Proving Grounds, MD).

Information & Directions

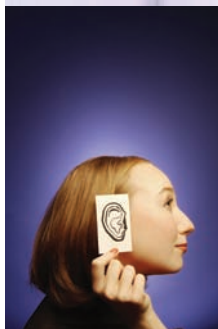

## TESTIMONIAL

"The tinnitus (ringing in the ear) in my left ear was so loud I could hear it well above the road noise and radio in my car while on the highway. I would rate the loudness as an 8 on a scale of 1-10."

"I'm very pleased to report substantial reduction in the loudness level of my tinnitus. The tinnitus is still there, but the loudness level is down to about a 4 most of the time. Occasionally, I have to really listen to make sure it is still there!! Joy!!"  
-Jewell Baggett-Strehlau,  
Doctor of Audiology, Nashville, TN

"I wanted to give you a personal update on taking your suppliments... I am feeling wonderful!!! I was able to shake another sinus bout without antibiotics. I have more energy. The pollen does NOT bother me...first time in about 15 years!!! Since taking your micronutrients, I have been able to build up more of a resistance and finally got rid of whatever residual sinus infection I had on my own."  
-N. Bailey, Nashville, TN

"I love playing the fiddle, but dealing with rheumatoid arthritis made my fingers stiff and sore. I started taking PMC formulation and noticed a real improvement in my ability to move with a little less pain each day. Six weeks later my fiddle and I are making music again!  
-D. Upchurch, Pueblo West, CO

## WHAT TO EXPECT

Hearing Health is a complete daily micronutrient supplement formulated with specific ingredients that may support:

- ✓ Improvement In Hearing Health
- ✓ Reduction In Ringing In The Ear (Tinnitus)
- ✓ Increase In Immune System Function
- ✓ Reduction Of Inflammation
- ✓ Increase In Energy
- ✓ Improvement In Overall Health

- Since Hearing Health is a complete daily supplement - no other additional daily vitamins should be taken.
- Reduced ringing in the ear and improved hearing may be noticed within the first three to six months, but continued use will help provide ongoing protection. Remember, your hearing damage occurred over a long period of time. So, for best results, be patient while using Hearing Health.
- For maximum safety, Hearing Health does not include any herbal ingredients, heavy metals (e.g. zirconium, molybdenum, vanadium) or unnecessary ingredients (e.g. PABA, inositol, choline).

## SCIENTIFIC STUDY

The PMC formulation was evaluated in collaboration with the Naval Medical Center San Diego. U.S. Marine personnel with balance disorders from blast-related head injuries in Iraq were treated in the Spatial Orientation Laboratory. A 12-week randomized, prospective, blinded study was completed comparing standard therapy to standard therapy plus the micronutrient.

The study included several measuring techniques for hearing and balance and the micronutrient treated group performed better on all measures than the untreated group. There were no adverse effects from the PMC formulation. Scientifically speaking, the micronutrient group had significantly better scores (P value, Student's t-test) on sensory organization and higher scores in all other measures.
